

# FUSE PRO

## Low Voltage Control Circuit Testers

Introducing the next generation of control circuit testing. Fuse Pro is the latest in low voltage control testing. Replacing and wasting fuses while testing and servicing control circuits is “a thing of the past”. Fuse Pro testers can now plug directly into PC boards while the system is being serviced and diagnosed. The built in light provides visibility for dark control board locations. The included wire leads provide additional use in “hard to reach” areas.

Two available sizes: 3 or 5 AMP

Plugs directly into PC board for furnace, boilers, air handlers, unit heaters, roof top units, water heaters and any system with a fused printed circuit board

Built in light for dark control board locations

## Product Specifications

BRK3	3 AMP tester
BRK5	5 AMP tester
Rated Voltage	24/125/250VAC 50VDC 50~60Hz
Minimum Voltage	Less than 0.25V
Contact Life Test	125VACx150% (current test over 500 times)
