

EDISON SINGLE HOLE FAUCET INSTALLATION

BEFORE YOU BEGIN

We recommend consulting a professional if you are unfamiliar with installing plumbing fixtures. Signature Hardware accepts no liability for any damage to the faucet, plumbing, sink, counter top, or for personal injury during installation.

Observe all local plumbing and building codes.

Unpack and inspect the faucet for shipping damage. If any damage is found, contact our Customer Relations team at 1-866-855-2284.

GETTING STARTED

- Ensure that you have gathered all the required materials that are needed for the installation.
- For these instructions, it is assumed that the old faucet has been completely removed and any necessary repairs or modifications to the water supply have been completed.

INSTALLATION

1. Ensure that the water supply below your sink is completely shut off by turning the shutoff valves all the way to the right.

Tip: Place a small bucket below your workspace to catch any water that may drip during the installation process.

2. Remove the lock nut and rubber washer from the faucet body. Insert the faucet through the mounting hole in your counter top.

3. From beneath the sink, slide the rubber washer back onto the faucet body. Thread the locknut back onto the shank until hand tight. Finish tightening using a basin wrench.

4. Apply plumber's tape or thread sealant to the threading on each of the faucet's water lines, and connect the main water hoses to the faucet. Use an adjustable wrench to tighten, but be careful not to overtighten. Ensure that you are connecting the hot and cold lines appropriately.

5. Once installation is complete, turn the main water supply back on from underneath your sink. Check for any leaks underneath.

6. Proceed to the drain installation. Once complete, remove the aerator from the spout and turn the faucet on for approximately 60 seconds to remove any dust or loose sediment from the water lines. Ensure that there are no leaks, and that both hot and cold water are running properly. Turn the water off and reattach the aerator.

2. Apply plumber's tape to the threading on the tailpiece, then reattach the tail piece to the pop-up drain flange.

3. Slide the flat rubber gasket up the tailpiece until it meets the lip of the pop-up drain flange.

4. Insert the drain flange and tailpiece through the top of your sink's drain hole.

5. From under your counter, slide the tapered rubber gasket followed by the plastic friction washer onto the tailpiece until they meet your sink or countertop. Be sure that the tapered side of the rubber washer is facing up.

6. Thread the lock nut onto the drain flange. Hand tighten until secure, then finish tightening with a basin wrench once the drain is properly aligned.

Important: Be careful not to overtighten, which could crack a porcelain sink or stone countertop.
