

The Pan Guard Pro is exactly the guard you need, at precisely the moment when you need it.

How It Works

- 1.) Place Pan Guard Pro directly over lip of any sized water heater pan before removal and/or install of water heater unit. Pan Guard Pro design will perfectly fit over lip of any drain pan.
- 2.) Once Pan Guard Pro is properly set over lip, simply place weight of unit onto Pan Guard Pro. Pan Guard Pro can withstand forces up to 100-gallon capacity water heater preventing crushing of drain pan and/or drain pan lip.
- 3.) Upon proper positioning or removal of new or existing water heater unit, simply remove Pan Guard Pro from drain pan lip and resume work.
