

URETHANE REINFORCED WAX BOWL RING

GENERAL INFORMATION:

Oatey Urethane Reinforced Wax Bowl Ring gaskets have flanged polyethylene sleeves permanently molded into a tough, flexible urethane foam gasket completely impregnated with amber colored petrolatum wax. No. 31195 gaskets are plastic wrapped in handy ready-to-use packages for clean, efficient handling, and positive seal. These gaskets were especially designed for those hard-to-hold floor outlet closet bowls, off-the-floor, and wall outlet closet bowls. Not for use on crane wall mount.

INSTALLATION:

No. 31195 gaskets fit 3" and 4" waste lines for floor and wall outlet bowls. Wax bowl ring must be at least 70 degrees Fahrenheit to insure proper flow of wax. All surfaces must be dry and free from hardened putty, loose scale and contaminated wax. Remove debris by scraping or wire brushing, then dust and dry all surfaces before installing gasket. Press gasket over horn of outlet on toilet bowl and set in place over closet bolts and use body weight to compress gasket. Twist bowl slightly to spread wax then tighten flange bolts carefully to prevent breaking bowl. Polyethylene sleeve will help guide bowl outlet in line with floor flange.

RESTRICTIONS AND CAUTIONS:

DOES NOT FIT CRANE WALL MOUNT. DO NOT INSTALL ON WET SURFACE. Keep away from direct sunlight to prevent darkening wax. Do not store near extreme heat. Please refer to our Material Safety Data Sheet for more information.
