

## ChlorPro Series Chemical Injector

The ChlorPro Series Chemical Injector is ideal for new watermain disinfection and dechlorination.

Chlorinate up to 200 ppm (model specific) and then dechlorinate using the same device. Simplicity at its best!

Designed to chlorinate using either liquid Sodium Hypochlorite (12.5%) or Calcium Hypochlorite (65-68%) granular. Dechlorinate using liquid CAPTOR (Calcium Thiosulfate).

Disinfect your new watermain during filling at flow rates up to 400 gpm. The flow rate device is Bluetooth and will pair with any Android or Apple mobile device. Once the flow rate is identified and the desired chlorine concentration is predetermined one can easily, by push-of-button, select the appropriate pump setting.

O&M 1-2026 v2.5

### FEATURES AND BENEFITS

- Chlorinate and dechlorinate with one device
  - **POLCP50** - For chlorine concentrations 25-100 ppm (under optimal conditions)
  - **PCPU100** - For chlorine concentration 100-200 ppm (under optimal conditions)
- Inlet / Outlet: 2-1/2" FNST x MNST
- Flow Rate: 100-400 gpm (Bluetooth)
- Easy-to-use digital push button settings
- 120 VAC power required
- Includes rolling carry case
- Satisfies AWWA/ANSI C655-18 - Chlorination and Dechlorination Regulations
- Satisfies Federal EPA & Clean Water Act Requirements

American Water Works  
Association
