

DryerClamp

Four Inch Hybrid Worm Drive Clamp

100% Stainless Steel

Smoother operation, better material and a multi-driver screw head combine to make the DryerClamp a must have for cleaning dryer exhaust systems.

The DryerClamp helps speed up connection time and ensures a no-slip attachment to the dryer.

DryerClamp DC4—Faster Connections

Unlike zinc coated clamps, a stainless steel band delivers a noticeably smoother operation.

DryerClamps open fully so you can get them around the transition duct when you connect it to the wall (other clamps don't). Their extended screw provides ample space for hex head drivers and makes power drill use a breeze.

DryerClamps are built for easy installation— helping you move to the next job faster and make short work of return visits.

Works Great with

DryerClamps work with all transition hose including semi-rigid and InOvate's exclusive DryerFlex®.

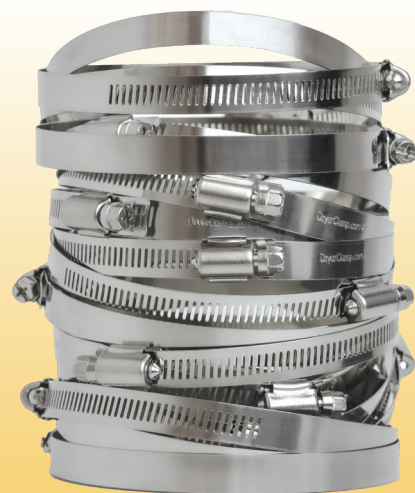

Exclusive

5/16" Hex / Phillips / Flat Blade
