

# BALANTINE WALL-MOUNT FAUCET INSTALLATION

## BEFORE YOU BEGIN

We recommend consulting a professional if you are unfamiliar with installing bathroom fixtures and plumbing. Signature Hardware accepts no liability for any damage to the floor, walls, plumbing, or personal injury during installation.

For the following installation instructions for your new Wall-Mount Faucet, it is assumed that any old fixtures have been removed and the water supply lines have been relocated to the proper installation location.

Unpack and inspect the item for damage. If any damage is found, contact our Customer Relations team at 1-866-855-2284.

---

## GETTING STARTED

- Ensure that you have gathered all of the required materials that are needed for the installation.
  
- Shut off the main water supply where the new faucet is being installed.

## TOOLS AND MATERIALS:

Plumber's Tape

Drill

Thread Sealant

Tape Measure

Level

Hex Wrench

Pipe Clamps

## INSTALLATION

1. Prepare for installation by installing wood blocking between the two studs where the faucet will mount.

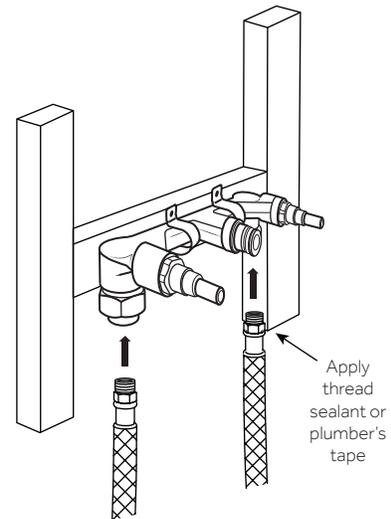

**Important:** Take into consideration the thickness of your finished wall materials. If your valve is installed too far behind your finished wall, you may be left with insufficient clearance to attach the spout and handles.

2. Mount the rough-in valve into its prepared location. Attach the valve body to the wood blocking using galvanized pipe clamps. Use a level to ensure that the valve is mounted straight.

3. Attach the main water lines to the valve. Apply thread sealant or plumber's tape to the threaded connection to ensure a watertight seal.

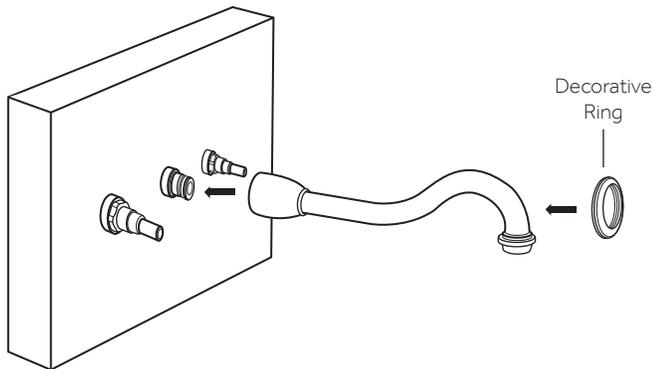

**IMPORTANT: COMPLETE THE CONSTRUCTION OF YOUR WALL, INCLUDING ANY FINISHED WALL MATERIALS SUCH AS TILE, BEFORE PROCEEDING WITH THE REMAINDER OF THE INSTALLATION.**

4. Once your finished wall has been completed, slide the decorative ring onto the base of the spout. Attach the spout to the installed valve body. Once in place, tighten the set screw underneath to secure.

5. Attach the handle escutcheons to the installed valve body. Thread each escutcheon onto each stem until hand-tight. Ensure that the rubber washers remain seated in the escutcheons.

6. Attach the hot and cold handles to the valve stems, as shown. Ensure that the hot handle is on the left, and the cold is on the right.

7. When your installation is complete, turn on the main water supply. Remove the aerator from the spout. Turn the water on to allow any dust or loose sediment to clear the system. Allow the water to flow through the spout for approximately 60 seconds, and verify that hot and cold water are running properly. Reattach the aerator once testing is complete.
