HEAD ASSEMBLY

MID-FRAME

As an aid to reassembly, take notice of wire routings and position in wire guides and traps while dismantling tool.

Be sure that all components of electronics kit are seated firmly and squarely in housing recesses.

Avoid pinched wires, be sure that all wires and sleeves are pressed completely down in wire traps.

Prior to securing mid-frame onto the head, be sure that there are no interferences.

Before installing the battery, check for proper functionality of switch.

Install battery and depress switch triggers to assure tool is operating properly.
