

EDF8 Electronic control

w/dehumidification function, display, 1-gang box, 2 wires

Item #: 415517

An electronic dehumidistat control that features multiple ventilation modes to assist homeowners with controlling and optimizing their ventilation system.

This control activates the system on 3 possible modes of operation:

- Ventilation Mode
- Recirculation Mode
- Standby Mode

Ventilation mode removes stale air from inside your home and replaces it with fresh outdoor air. **Recirculation mode** takes air from areas of your home and redistributes it to other rooms. No outdoor air is introduced into the home. **Standby mode** leaves the appliance inactive unless the indoor relative humidity is above the setpoint on the control.

The fan speed has 3 settings: Reduced, Medium, and Normal or 20min/h.

Manufactured with the customer in mind, this controller works with all Fantech fresh air appliance models.
