

UNIVERSAL CONCENTRIC VENT KIT (UCVK™)

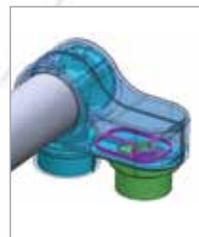

NEW PRODUCT SHOWCASE

Tankless Venting Made Easier

Universal Concentric Vent Kits (UCVK™) are a welcome product extension to the existing IPEX Flue Gas Venting termination product offering.

The UCVK is a versatile device allowing for compact space saving installations of tankless water heaters. It seamlessly transitions from vertical collars on the heater to a horizontal concentric vent for sidewall termination.

System 1738® and System 636® UCVKs are engineered with an air intake hub, which pivots to accommodate the different spacing requirements between the fresh air and exhaust of tankless water heaters sold today. The innovative design optimizes productivity through ease of installation.

The System 1738® UCVK™ is shown

System 1738® System 636®

The Universal Concentric Vent Kit (UCVK™) includes:

- A universal concentric vent kit body
- Concentric vent pipe
- Rain cap

SYSTEM 1738® UCVK in PVC

Suitable for use on appliances with flue gas temperatures up to and including 149°F (65°C).

SYSTEM 636® UCVK in CPVC

Suitable for use on appliances with flue gas temperatures up to and including 194°F (90°C).

FEATURES & BENEFITS

- Certified to UL 1738 or ULC S636 venting standards
- Available in PVC and CPVC to cover a range of operating temperatures
- Designed to accommodate 3" venting with flexibility for 2"
- Engineered for a wide range of appliances with varying collar space requirements
- Accommodates the left or right side exhaust collar of the appliance
- Compact horizontal concentric vent design allows for installation of an appliance tightly on an exterior wall
- All required components for installation included in a single package

System 636®, System 1738® and UCVK™ are trademarks of IPEX Branding Inc.
Universal Concentric Vent Kit (UCVK™) is patent pending.
