CAN LINER SELECTION

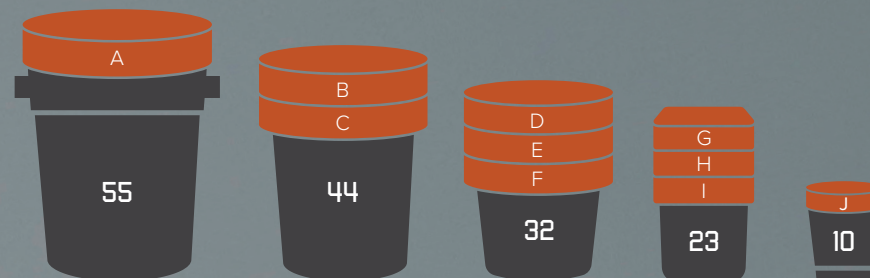

SOURCE REDUCTION

Help keep excess plastic out of landfills while reducing your operating costs:

- Right-sized liners ensure a better fit over containers, reducing waste due to oversizing
- We use less plastic to produce high-quality liners that feature improved performance at thinner gauges
- Westcraft liners are made of abundant, all-natural minerals, reducing the reliance on petrochemical materials
- Overall, our liners help you do more with less

KNOW THE DIFFERENCE

Linear Low-Density Liners	High-Density Liners
Used for rough or sharp objects	Ideal for more common waste (non-sharp)
More resistant to tearing and punctures	Good resistance to tearing and punctures
Handles less weight than high-density liners	Increased weight capacity for more waste

HIGH-PERFORMANCE LLD

- Premium quality resin
- Linear-Low Density (LLD) bags are very strong and more resistant to tearing, but handle lower load capacities than high-density bags
- Applications include: sticks, rough yard trimmings, glass, metal with sharp edges, plastic eating utensils and food with rough edges
- Tight star seal to prevent leakage
